

Hello %%First-Name%%,

According to [Gartner's December 2022 Forecast](#), the worldwide Low-Code Development Technologies market is expected to grow 20% in 2023. As a Microsoft customer, you already know that the Power Platform is Microsoft's Low-Code/Pro-Code platform of choice and, for the fourth year in a row, it has been named to [Gartner's Magic Quadrant for Enterprise Low-Code Application Platforms \(LCAP\)](#).

So, what's fueling the growth of Low-Code Application Platforms around the world? Pure and simple, building solutions in Power Platform and other LCAPs, allows businesses to rapidly meet more of their automation demands. Often, the build is accomplished by fusion teams, a close pairing of the business and Low-Code/Pro-Code technologists to develop the apps, workflows and reporting solutions that enhance productivity. The pace at which organizations are rolling out complex, enterprise-grade, business critical solutions on the Power Platform and other LCAPs is astounding. As a result, the platforms are maturing, as evidenced by Microsoft's ongoing investment in Power Platform governance and recent announcements of operational tools for enterprise customers, like Managed Environments.

The Power Platform suite - Power Apps, Power Automate, Power BI, Power Pages, and Power Virtual Agents - are likely available to you now, as the foundational versions are included in business premium and enterprise licensing of M365. We work with customers at all stages of their automation journey, from building out their first (of many usually) Power App to collaborating on the strategy and creation of tools to govern hundreds and thousands of solutions using the Power Platform Center of Excellence kit. A common goal of these customers is to empower the organization, ensure governance and compliance standards are met, and to get the maximum value from Microsoft 365.

If you are seeking to power your organization with Low-Code/Pro-Code solutions to meet critical business needs, are preparing to replace InfoPath or other legacy-based processes within your organization or are ready to take your organization to the next level with governance and implementation of the Power Platform COE, we can help. [Compass365's Business Applications](#) team has deep expertise and maturity in the Power Platform to guide you in your journey.

Why Low-Code/Pro-Code?

1. Empower the business
2. Increase productivity
3. Quickly deliver cost-effective solutions
4. Enhance current LOB solutions
5. Become more agile in your delivery
