

Improve your SharePoint search experience

A faceted search solution that unlocks the true power of search and metadata in SharePoint

The SharePoint MetaSearch Solution

SharePoint MetaSearch is more flexible and powerful than basic filtered navigation. Offering multiple filters that specifically target different aspects of your content, MetaSearch optimizes search especially within extensive or distributed content sets.

MetaSearch enables you to build custom metadata aware search pages to quickly return results with the most relevant information. This functionality allows you to tailor your search pages to align with your unique business processes and categorization methods helping your information workers to efficiently locate the documents they require, enhancing their overall productivity.

SHAREPOINT METASEARCH BENEFITS

- Create customizable, faceted search pages for your sites and libraries
- Dramatically increase speed and accuracy of your searches
- Leverage metadata tagging to easily find needed documents
- Enable Intelligent type-ahead on text, choice, and managed metadata fields
- Real-time quantity indicators identifying the number of docs that exist with each metadata value during query building
- Query multiple libraries, sites, and site collections all on one page
- Build an unlimited number of search pages across all your SharePoint environments
