The time is now to say goodbye to InfoPath

Hi %%First-Name%%,

In the ever-evolving landscape that is the Microsoft ecosystem, staying ahead of the curve is crucial for Business and IT professionals alike. To ensure continuity and support modern work it's a business imperative to be aware of the impending retirement and end of support dates for Microsoft products and services. One of the most critical is the upcoming retirement of InfoPath Forms and SharePoint 2013 Designer workflows, both slated for 2026.

In just 2 short years, InfoPath form solutions will cease to work in the Microsoft 365 environment. Why is this such a concern for IT professionals? There are hundreds of thousands of InfoPath solutions in existence currently, ranging from SMB's with just a few key solutions to enterprise organizations with several hundreds, if not thousands, in the tenant. While dated, these solutions provided a stable and reliable method to automate critical business processes.

Replacing InfoPath form solutions with Power Apps, Microsoft's recommended technology, is not a migration project but rather a development project requiring technical expertise and business stakeholder involvement. The process is often resource-intensive and requires a well-planned, structured approach to ensure a smooth transition for your users.

As a long-term provider of Microsoft Power Platform services, the team at Compass365 has developed a proven process to efficiently assess, plan, rebuild and deploy InfoPath solutions in the Power Platform. If you are just starting the effort or knee deep in the process and looking for a partner to ensure you meet the July 2026 deadline, please reach out for a discussion.

Below you'll find links some InfoPath Replacement resources to help you along in the journey.
