

Hi%%First-Name%%,

This year's Ignite event made one thing clear: Microsoft is building a future centered on agentic AI. With major upgrades to Microsoft 365 Copilot, new admin agents for Teams and SharePoint, enhanced identity and security controls, and a redesigned Power Apps experience, organizations will soon have access to more intelligent automation than ever before. These updates mark a significant shift in how businesses will work, collaborate, and govern their Microsoft 365 environments moving forward.

At the same time, the shift to AI is not straightforward. The recent MIT NANDA report showing that 95% of enterprise generative AI initiatives fail to deliver value underscores a hard truth: AI success isn't guaranteed. Every organization will adopt and apply AI differently based on its goals, culture, data quality, and readiness. That's why preparation cannot be one-size-fits-all, it must be strategic, intentional, and aligned to your business.

If your organization is planning for Copilot or needs guidance defining a successful, tailored AI readiness roadmap, we're here to help. Contact us to begin your AI journey. You can also read our full post on the Ignite announcements and access the MIT report in the links below.
