

Hi%%First-Name%%,

Microsoft 365 Copilot holds the potential to transform how we create, analyze, and collaborate. But many organizations are discovering that Copilot success depends on the state of their Microsoft 365 environment.

Copilot operates within your existing ecosystem which includes document libraries, Teams workspaces, SharePoint sites, permissions, retention policies, and governance controls. Without preparation, AI can amplify existing inefficiencies or introduce unnecessary risk.

AI readiness is about aligning technology, governance, and user enablement before a broad rollout. That is why we developed our AI Readiness Accelerator for Microsoft 365 Copilot program that takes a structured approach to assessing content, strengthening security and compliance controls, reducing redundant data, and preparing users for adoption.

Copilot can transform how work gets done. The right preparation ensures it does so securely, strategically, and with measurable impact. If AI is part of your roadmap, now is the time to evaluate the environment that will power it.

---

## Resources

### AI Readiness Accelerator for Microsoft 365 Copilot

Get AI-ready with Compass365. Our AI Readiness Accelerator strengthens governance, initiatives at risk of failure and how to prepare security, and compliance across Microsoft 365 your environment and your organization. for safe and impactful adoption.
