

Hi %%First-Name%%,

If your organization did a lift-and-shift migration into SharePoint Online, there's a good chance you're still running on subsites. Microsoft hasn't set a retirement date yet, but in our Copilot Readiness program, subsite architecture is one of the most common blockers we run into with clients.

Subsites were the right answer for a different era of SharePoint. Today they create broken permissions, governance gaps, navigation headaches, and real friction for any organization trying to get value out of Microsoft Copilot. This is exactly the kind of problem our [M365 Migration and Modernization services](#) were built to solve — moving organizations from legacy SharePoint structures to a flat, hub-based architecture designed for the way M365 works today.

We put together a full breakdown of why subsites are holding organizations back and what restructuring actually looks like which you can find below.

Resources

SharePoint Subsites Need to Go

SharePoint subsites create security gaps, governance headaches, and Copilot readiness problems. Learn why hub sites are the modern fix and how to make the move.
